a^{th}

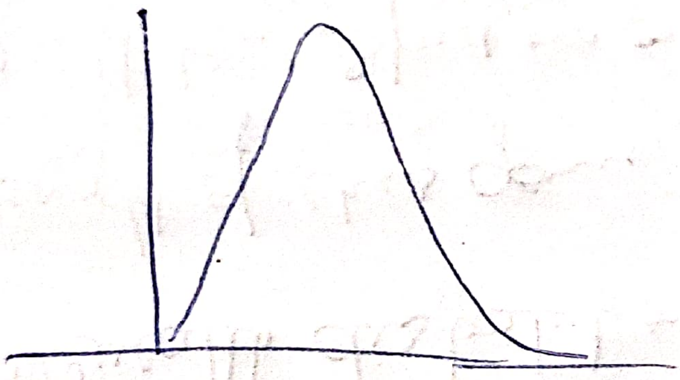
Mean ⇒ $\frac{a+b}{2}$

Median

① Log Normal Distribution

x = log Normal Distribution (μ, σ)

⇒ Right skewed distribution



$y \approx \ln(x)$

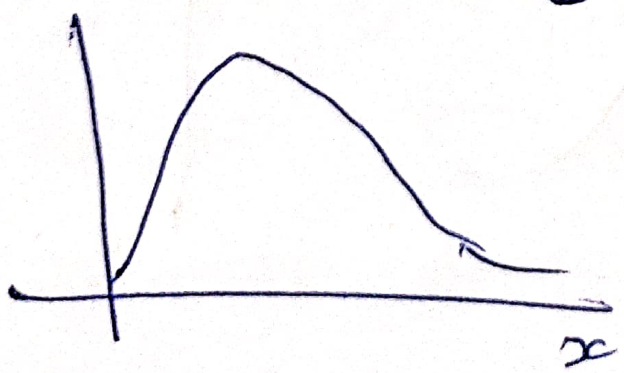
⇓

Natural log

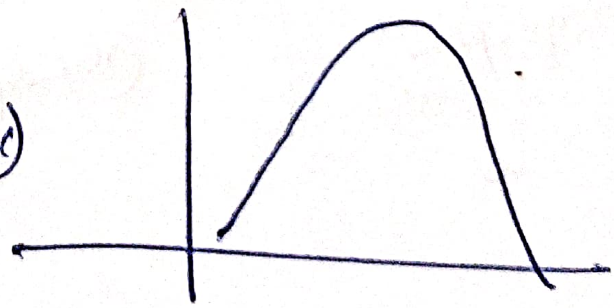
[$\log_e$]

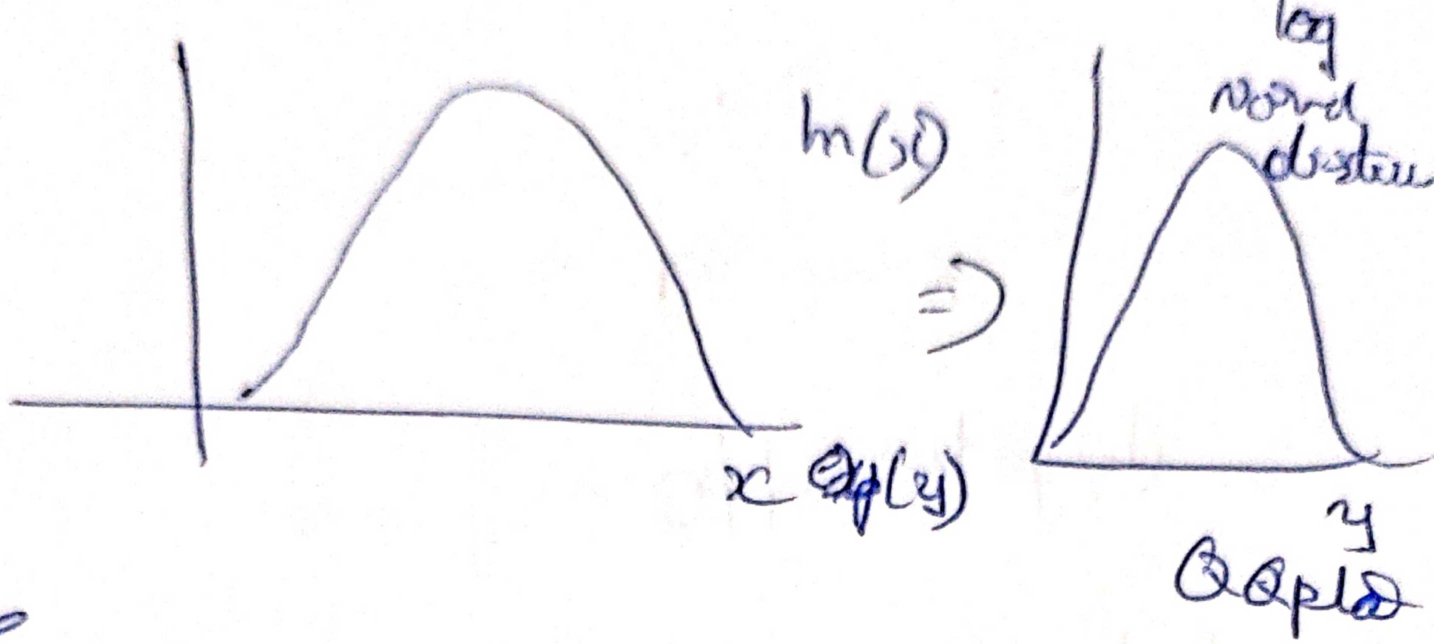
~~x~~ If we apply Exponential (y)

$x \approx$ log Normal



$\ln(x)$





Eg:- ① wealth distribution of the world.

② length of chess games

④ Dwell time spent on online articles.
