

Random Variables: -

Let x

$$\mu = \frac{\sum_{i=1}^N x_i}{N}$$

{5, 8, 12}

 $x \rightarrow$ function $\rightarrow$ Values $\Rightarrow$ Process

$$x = \begin{cases} H \\ T \end{cases}$$

Tossing a coin

$$x = \begin{cases} H \\ T \end{cases}$$

$$x = \begin{cases} 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \end{cases}$$

Rolling a die

Random Variable

Discrete Random

Eg: - Tossing a coin
Rolling a die1
2
3
4
5

Continuous Random

Eg: - How much it gonna rain $\rightarrow$

20.15 cm

200 miles

 $\therefore$ weight1.675 gr516 gms

$$y = 5x + 2$$

??

$$y = 5(1) + 2$$

$$y = 7$$

$$y = 5(2) + 2$$

$$10 + 2$$

$$12$$

$$x = 1$$

$$y = 7$$

$$x = 2$$

$$y = 12$$
