

Estimates :-

$\Rightarrow$ Inferential

Estimate is a specified observed numerical value used to estimate an unknown population parameter.

Types

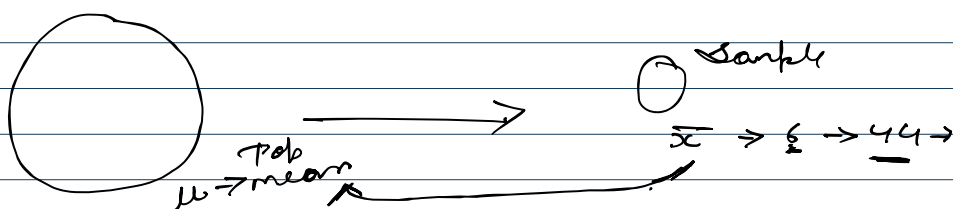

i) Point Estimate :-

{1, 2, 3, 4, 5, 6} ... pop

$\bigcirc \leftarrow \bigcirc \rightarrow z\text{-test}$
Conclusion

Single numerical value used to estimate an unknown population parameter

Eg :- Sample mean ($\bar{x}$) is a point estimate of population mean

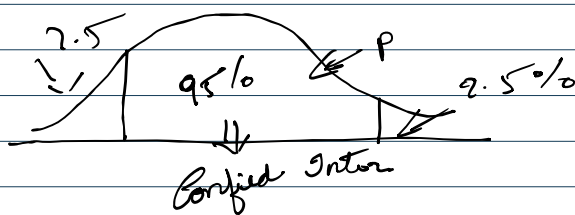

ii) Interval Estimate

A range of value is used to estimate unknown population parameter

_____ | _____
point
estimate

55 - 65

$\downarrow \downarrow$
Confidence Interval

$z\text{-test}$

$t\text{-test}$

$p < (1) \Rightarrow$ occurring in
