

The Scales of Measurements describe the Nature of Information within the values assigned to the Variables.

4) $\rightarrow$

i) Nominal

ii) Ordinal

iii) Interval

iv) Ratio

1) Nominal Scale

Def:- This Scale classifies data into distinct categories that do not have an Intrinsic order

chars

i) Data is Categorized based on labels, names

or qualities

Nonail order

ii) Mutually Exclusive ✓

Eg $\rightarrow$ Gender M $\rightarrow$ M - 0.5

F $\rightarrow$ F - 0.5

iii) NO logical order.

2) Ordinal Scale

Def:- Classifies the data into Categories that can be Ranked or Ordinal.

chars:-

i) Data is Ranked

Eg:- Degrees

1st 0-
2nd 1-
3rd 2-

ii) Intervals are not necessarily equal

3

Interval Scale

Def:- The Interval Scale not only Categorizing and orders but also specify the exact diff b/w Intervals

chars

1) Data is ordered with consistent Interval

10-40

50-60

60-70

2) Allow Comparisons

Eg Temperature

3) No true zero point

32°F, 10°F, 70°F

0-10 | 10-20

4) Ratio Scale

(4) Ratio Scale

⇒ order matters

⇒ Differ in Measure

⇒ Contains 0 starting points

0, 30, 60, 90

$$\frac{30}{60} = \frac{1}{2}$$
