

## i) Descriptive statistics

Descriptive statistics Includes methods for summarizing and organizing data to make it understandable

- i) Measure of Central Tendency  
(Mean, Median, Mode)
- ii) Measure of Dispersion  
(std Variance, Std deviation)
- iii) Data Distribution
  - i) Histogram
  - ii) Box plot
  - iii) Pie chart
  - iv) Dof
- iv) Summary statistics

eg:- weights of student

60 kg 75 80 70 90

→ Avg weight of student  $\left[ \frac{\sum x_i}{n} \right]$

## ii) Inferential statistics

Inferential statistics Includes methods for making prediction or Inferences about a population based on a sample data

- |                       |                    |
|-----------------------|--------------------|
| i) Hypothesis testing | ii) Z-test         |
| iii) p-value          | iv) t-test         |
|                       | v) Chi-Square test |

→ Inferential →
